SOLIDWORKS 2019 server products are not supported on Windows Server 2008 R2 or Windows Server 2012. SOLIDWORKS 2015 SP5 and SOLIDWORKS 2016 now support Microsoft Windows 10 64-bit (Professional and Enterprise editions) SOLIDWORKS 2014 was the last release that supports 32-bit operating systems. SOLIDWORKS 2015 and later will not install on 32-bit operating systems. Starting with the SOLIDWORKS 2015 release, the SOLIDWORKS Viewer is being retired and will be replaced by the eDrawings Viewer. The SOLIDWORKS 2014 Viewer will remain available for download but will not open SOLIDWORKS 2015 and later models. The eDrawings Viewer 2015 is available on 64 bit operating systems only. For the complete list of supported operating systems, please see SOLIDWORKS 2016 eDrawings 32-bit Support eDrawings 2015 was the last release that supported the Windows 32-bit operating system. eDrawings 2016 products will not install on the Windows 32-bit operating system. 64-bit refers to a processor with registers that store 64-bit numbers. A generalization suggests that 64-bit doubles the data a 32-bit CPU can process. 32-bit refers to the number of bits (the smallest unit of information on a machine) that can be processed or transmitted in parallel, or the number of bits used for single element in a data format. The term when used in conjunction with a microprocessor indicates the width of the registers; a special high-speed storage area within the CPU. A 32-bit microprocessor can process data and memory addresses that are represented by 32 bits. In 32-bit desktop systems, you can have up to 4GB of RAM (provided your motherboard that can handle that much RAM) which is split between the applications and the operating system (OS). 64-bit therefore refers to a processor with registers that store 64-bit numbers. A generalization would be to suggest that 64-bit architecture would double the amount of data a CPU can process per clock cycle. Users would note a performance increase because a 64-bit CPU can handle more memory and larger files. One of the most attractive features of 64-bit processors is the amount of memory the system can support. 64-bit architecture will allow systems to address up to 1 terabyte (1000-GB) of memory. Drivers, Software Show Benefits of 64-Bit Unfortunately, most benefits of a 64-bit CPU will go unnoticed without the key components of a 64-bit operating system and 64-bit software and drivers which are able to take advantage of 64-bit processor features. Additionally for the average home computer user, 32-bits is more than adequate computing power. When making the transition from 32-bit to 64-bit desktop PCs, users won't actually see Web browsers and word processing programs run faster. Benefits of 64-bit processors would be seen with more demanding applications such as video encoding, scientific research, searching massive databases; tasks where being able to load massive amounts of data into the system's memory is required. While talk of 64-bit architecture may make one think this is a new technology, 64-bit computing has been used over the past ten years in super computing and database management systems. Many companies and organizations with the need to access huge amounts of data have already made the transition to using 64-bit servers, since a 64-bit server can support a greater number of larger files and could effectively load large enterprise databases to into memory allowing for faster searches and data retrieval. Additionally, using a 64-bit server means organizations can support more simultaneous users on each server potentially removing the need for extra hardware as one 64-bit server could replace the use of several 32-bit servers on a network. It is in scientific and data management industries where the limitations of the 4GB memory of a 32-bit system have been the most apparent. Some of the major software developers in the database management systems business, such as Oracle and SQL Server, to name just two, offer 64-bit versions of their database management systems. While 64-bit servers were once used only by those organizations with massive amounts of data and big budgets, we do see in the near future 64-bit enabled systems hitting the mainstream market. It is only a matter of time until 64-bit software and retail OS packages become available thereby making 64-bit computing an attractive solution for business and home computing needs. Terms of use. 64-Bits Goes Prime Time—Almost Ever since the first Athlon 64 processor shipped, buyers and builders of 64-bit desktop systems have waited for a mainstream 64-bit operating system. While they waited, Apple shipped partially 64-bit versions of MacOS 10, but of course only Mac owners could enjoy those. Meanwhile, Linux users could happily install any of several 64-bit distros on their systems. Finally, Windows XP Professional x64 is here—sort of. For example, it's tough to buy a desktop PC system today with Windows XP Pro x64 (which we'll just call Windows x64). None of the major manufacturers are shipping systems with Windows x64 installed, unless you buy an engineering or professional graphics workstation. Even the boutique resellers, such as Falcon Northwest, VoodooPC, or Alienware don't seem to offer Windows x64 preloaded. And you can't just run out and buy a retail copy—Microsoft is making it available only as an OEM item, which retail stores won't stock. So there's a version that needs to be bought with a system, but you can't buy a system with it installed. Confused yet? Actually, you can buy OEM copies of Windows x64, but you typically need to purchase it with some sort of hardware: usually a processor, hard drive, or motherboard will suffice. In some cases, you may only need to buy a cheap keyboard or mouse in order to fulfill the OEM requirement. We've worked with stores that will sell it to us without the added hardware, but only because we regularly buy system-level hardware from them. The other way to obtain Windows x64 is directly from Microsoft—but only if you've previously bought a system that's 64-bit capable and it was bought with a licensed copy of Windows XP Professional. Windows XP Home and Windows XP Media Center Edition aren't eligible. Your PC hardware must have been ordered or built between March 31, 2003, and July 31, 2005. Note the escape clause—"or built." So if you built your own system, you can presumably order a copy. You are sacrificing the license for the 32-bit copy you're upgrading, and it has to be either a full retail, OEM, or System Builder version. Assuming your version of Windows XP Professional is eligible, you plunk down \$12.99 with a credit card and Microsoft sends you a DVD-style case with the CD and new CD key. You can read the fine print on upgrading to Windows XP Professional x64 at the Microsoft web site. You'll also want to check out PC Magazine's in-depth analysis of Windows XP Professional x64. Get your SOLIDWORKS 2019 Update frequently asked questions answered below: SOLIDWORKS 2019 Update General Information Review our SOLIDWORKS 2019 update general topic questions: How can I learn about the new features in SOLIDWORKS 2019? What Windows Operating Systems will be supported by SOLIDWORKS 2019? The following operating systems are supported by SOLIDWORKS 2019: Windows 7 SP1, 64-bit Windows 10, 64-bit Note: SOLIDWORKS 2019 is not supported on Windows 8.1 Windows Home Editions are not supported Only Microsoft Windows networking is supported. Novel networks and non-Windows network storage devices are not supported IMPORTANT: Windows 7 support will end with SOLIDWORKS 2020 SP5 Please see the SOLIDWORKS System Requirements for additional information. Are Virtual Environments Supported? Only select Virtual Environments are supported. Please see the SOLIDWORKS Virtual Environments support page: NOTE - Virtual environments require a certified CPU for good performance of SOLIDWORKS, eDrawings and Draftsight. Certified GPU drivers for virtual environments can be found on the SOLIDWORKS testing page (choose "Virtual Desktop" from the Computer Vendor dropdown). Will SOLIDWORKS 2019 files open in previous major releases (i.e. in SOLIDWORKS 2018)? The Previous Release Interoperability functionality allows 2019 parts and assemblies to be opened in SOLIDWORKS 2018 SP5, with limited functionality. Learn more. Can I run any third party add-in or custom program with SOLIDWORKS 2019? SOLIDWORKS Gold Partner companies have 30 days from the release of SOLIDWORKS 2019 to support the latest version. Check with the Gold Partner that their add-in product is compatible before upgrading. Click here for Gold Partner product details. Select "Refine your Search with Criteria" and click the checkbox "Show Certified GOLD Partner Products Only" Support Partner (Non-Gold) companies support the latest release on their own schedule. Check with the Solution Partner that their add-in product is compatible with SOLIDWORKS 2019 before upgrading. Click here for Solution Partner product details Custom programs/add-ins should be checked to ensure they are compatible with the latest release. Review our SOLIDWORKS 2019 update installation frequently asked questions: What is the SOLIDWORKS 2019 Installation Manager? Each release of SOLIDWORKS has its own Installation Manager. It is a standalone application that can download/update/upgrade/install/modify/repair all SOLIDWORKS products. It can be used to create and manage administrative images and standalone installs all within the same user interface. The Installation Manager can be downloaded from the SOLIDWORKS Customer Portal for each version/service pack. How does the SOLIDWORKS 2019 Installation Manager work? The SOLIDWORKS 2019 Installation Manager uses Windows Installer and installs all products silently passing the required parameters to the installations. This location will be used as the root folder for the installation of all products. The advantage of using the Installation Manager is that it keeps all Products under the same folder in the Startup program list as well as creating one listing in Programs and Features in the Control Panel (listed as SOLIDWORKS 2019). What should I do before I upgrade to SOLIDWORKS 2019? Update your graphics card driver to a SOLIDWORKS certified version. SOLIDWORKS recommends the use of certified graphics cards and systems. A certified graphics card and system is tested and supported by the vendor. A listing of the latest certified drivers may be found on the graphics card testing page. NOTE - If you are running a specific brand of workstation (i.e. Dell, HP, Lenovo), be sure to select the Computer Vendor when making your video card selection. The standard graphics cards for these models will be available. If your installed graphics card is not listed as an option, then set the Computer Vendor as "Any System Vendor" to obtain the generic driver for your graphics card. Check System Requirements to ensure successful installation and optimum performance, verify that your system complies with the requirements. IMPORTANT - LOCAL Administrative rights are necessary on the local system to perform SOLIDWORKS installations or upgrades. System DLLs and drivers are updated which require administrative privileges. The necessary permissions must be obtained to ensure a successful installation of SOLIDWORKS. Windows Power User status is sufficient after installation as only read and execute permissions are required to use SOLIDWORKS. IMPORTANT - If you are NOT using a PDM product which retains all your previous revisions (i.e. SOLIDWORKS PDM Professional), then it is recommended to save or backup active projects, including all associated parts, assemblies, and drawings, in your current version prior to upgrade. We recommend creating a backup copy of your SOLIDWORKS Data folder as well (i.e. SOLIDWORKS Toolbox). Once the files are converted and saved in SOLIDWORKS 2019, these files cannot be opened and edited in a previous version of SOLIDWORKS. NOTE - Previous Release Interoperability is available between SOLIDWORKS 2019 and 2018 SP5. Learn more Backup all your custom document templates, sheet formats, etc. from previous releases before installing SOLIDWORKS 2019. Review our Installation Guides from our FAQs section. What's the recommended installation procedure, to upgrade or to perform a new installation? Both installation methods are supported. Updating your existing SOLIDWORKS installation can be done if users no longer require the prior version still on their system. A new installation will leave existing installations and install separately. Can I have more than one version of SOLIDWORKS installed on my system at the same time? Yes, it is possible to have multiple versions of SOLIDWORKS on the same system. During install, choose the option for a new installation and specify separate paths for the install directory and the Toolbox directory. Review the section "Installing SOLIDWORKS with Unique Install Directories" in our Installation Guides found in our FAQs section. To ensure complete separation between installations, follow these instructions: Can I upgrade to the latest release if I currently have a version that is two or more years behind? If you are skipping a version, it's typically best to uninstall your current version and install the latest version as a new installation. For detailed instructions on how to uninstall SOLIDWORKS, click here for our Clean Uninstall Procedure. What if I am upgrading and have SOLIDWORKS Toolbox installed in a shared environment? When the SOLIDWORKS Toolbox files are located on a server location and not on the local machine, upgrading the client SOLIDWORKS installation will not update the toolbox. The preferred procedure is to copy the toolbox files to a local machine, point the toolbox options to the local folder, then run a repair of the installation. Please review the following post for detailed instructions (applies to SOLIDWORKS 2019 as well): Where can I find more information about installations? Review our Installation Guides on our FAQ section: For more detailed information on installations, download a SOLIDWORKS Installation and Administration Guide. SOLIDWORKS 2019 Standalone Licensing - Locked Review our SOLIDWORKS 2019 update frequently asked questions for standalone licensing: Do I need to obtain a new serial number to install SOLIDWORKS 2019? Registration of SOLIDWORKS 2019 will be handled automatically through online Product Activation. If your license is on active subscription, your serial number will automatically be upgraded to the 2019 version. What is Product Activation? Product activation is a secure, hassle-free process that authenticates licensed users during the installation process. For more information regarding product activation please refer to the SOLIDWORKS Activation FAQ. I do not have internet or e-mail access on my SOLIDWORKS workstation, how will I activate my product? Activation requires that you have internet or email access. After activation, you do not need to be online to use the products. If you do not have internet access on the computer where SOLIDWORKS is installed, you can choose the Manual method to save an activation file, transfer to another computer with internet access (i.e. via a USB key) then email the file to activation@solidworks.com. Instructions will be provided during the activation process. The server that receives the activation email will automatically process it and email back an authorization file within minutes. Upon receipt of this activation file, simply move it back to your SOLIDWORKS workstation and run through the Manual Activation process again and read the file. If you have any activation problems, please contact Javelin's Support Help Desk. SOLIDWORKS 2019 SolidNetWork Licensing (SNL) - FLOATING Review our SOLIDWORKS 2019 update frequently asked questions for SNL: How is network (floating) licensing handled in SOLIDWORKS 2019? SOLIDWORKS 2019 continues to use the same SolidNetWork License Manager to provide network licenses for all SOLIDWORKS products. SOLIDWORKS PDM Standard and PDM Professional review use the same SolidNetWork License Manager in 2018. Network licenses can include SOLIDWORKS, Simulation, Composer, Electrical, Visualize and PDM products Allows for license borrowing when disconnected from the network What Operating Systems are supported for the SolidNetWork License Manager? Please review the section "SOLIDWORKS Network License Server" on the SOLIDWORKS System Requirements page. Can SOLIDWORKS, Simulation, Composer, Electrical, Plastics, Visualize and PDM products run from one license manager tool? Yes, users can manage all SOLIDWORKS product licenses using one utility. During installation, you can enter multiple serial numbers separated by commas. You will need to install the License Manager on a server, accessible by all clients. Please review the "SOLIDWORKS Installation Guide Network License" in our FAQ section. Why are the clients not able to obtain a SOLIDWORKS license from the server? There are most likely firewalls preventing the communication between the client and server machines. Please review our troubleshooting article. Do clients have access to the SolidNetWork License Manager to view licenses currently in use? Yes, to access the SOLIDWORKS SolidNetWork License Manager on a client machine, go to Start > SOLIDWORKS 2019 Tools > SolidNetWork License Manager Client 2019. Can the 2019 License Manager (SNL) support prior versions of SOLIDWORKS? Yes, the SOLIDWORKS 2019 License Manager will support all earlier versions of the software (since activation was introduced in 2008) Why do I see extra SOLIDWORKS Standard licenses on the "License Usage" tab in the SolidNetWork License Manager? A SOLIDWORKS Standard license is always required to be checked out when opening SOLIDWORKS. When an add-in that requires a higher license is enabled, the Professional or Premium license is checked out, but it keeps a Standard license checked out at the same time. What is the "License Order" tab in the SolidNetWork License Manager? The License Order tab allows you to change the order of product taken from the server if multiple levels of SOLIDWORKS Simulation products are available on the network (e.g. SOLIDWORKS Premium, SOLIDWORKS Simulation, SOLIDWORKS Simulation Professional, SOLIDWORKS Simulation Premium). If you need access to SOLIDWORKS Simulation Professional level studies and use SOLIDWORKS Premium, then SOLIDWORKS Simulation Professional must be listed above SOLIDWORKS Premium. Otherwise only the SOLIDWORKS Premium license will be used and just give access to Static studies. Get more information. What is the "License Borrowing" tab in the SolidNetWork License Manager? If you will be away from your network connection due to travel or working from home, you can borrow a license for a specified period. This keeps a SOLIDWORKS license on the computer and allows you to launch the program without being connected to your work network. Borrowing a Professional or Premium license automatically borrows the pre-requisite SOLIDWORKS Standard license. Can I upgrade the 2019 SolidNetWork License Manager? You can upgrade an existing SolidNetWork License Manager to a new version using SOLIDWORKS Installation Manager, rather than removing the previous version and then installing the new one. Can I use a remote desktop application to install and activate the License Manager on a server? Avoid using a remote desktop application as this can cause a mismatch of the hardware ID of the server during activation. This may cause a mismatch of the hardware ID at the SOLIDWORKS Activation Centre. An Activation Exceeded Count error may occur and the activation will fail. Please contact your SOLIDWORKS Technical Support Help Desk if this has occurred. Get more information. Where can I find more information about SolidNetWork License installations? Review our "SOLIDWORKS Installation Guide Network License" on our FAQ section Review our SOLIDWORKS 2019 update activation procedures for standalone and network licenses. Standalone License: To activate a standalone license: Start SOLIDWORKS and add-on required (i.e. Simulation). If you have not yet activated your license, the Product Activation dialog box appears. Choose the Automatic (recommended) or Manual option. Automatic - Submit the request automatically over the internet (requires internet connection) Manual - Click Save to create a file, and then send the file to activation@solidworks.com from another computer that has internet access. When you receive the response file, typically within minutes of the initial submission, copy to the client machine and run the activation procedure again and click Open to load the response file. The Activation/Reactivate Succeeded dialog box displays the products that have been activated. To transfer a standalone license: Open SOLIDWORKS on the activated computer Go to Help > Deactivate Licenses Choose the license to transfer (or select all) Choose the Automatic or Manual option and follow the steps (similar to the activation procedure) Once the transfer is successful, install and activate on the new computer Network Licensing: To activate a network license: Install the SolidNetWork License Manager on a server. Through the Installation Manager, choose Server Products > Install SolidNetWork License Manager. During the installation of the License Manager, you will be prompted to enter a SOLIDWORKS Network Serial Number. This is the same serial number used on all client machines as well. You can enter more than one serial number by adding commas (,) between licenses. You can update an existing SolidNetWork License Manager to a new version using SOLIDWORKS Installation Manager, rather than removing the previous version and then installing the new one. After the installation is finished launch the SolidNetWork License Manager from the Start Menu in the SOLIDWORKS Tools folder. Choose Yes when prompted "Would you like to activate now?" Choose the Automatic (recommended) or Manual option. Automatic - Submit the request automatically over the internet (requires internet connection) Manual - Click Save to create a file, and then send the file to activation@solidworks.com from another computer that has internet access. When you receive the response file, typically within minutes of the initial submission, copy to the server and run the activation procedure again and click Open to load the response file. The Activation/Reactivate Succeeded dialog box displays the products that have been activated. To transfer a network license from a server: Open the SolidNetWork License Manager on the server On the 'Server Administration' tab, click Modify Choose to Transfer/Deactivate license Choose the Automatic or Manual method and follow the steps (similar to the activation procedure) Install and activate the License Manager on a new server Point all client machines to the new server by opening the License Manager Client on each machine and change the server name in the Server List tab For more information, please review our "SOLIDWORKS Installation Guide Network License" on our FAQ section.
